

FLAXLIC® SHEEP

A Free Choice Supplement for Sheep on Pasture

FlaxLic® Sheep supplement is carefully formulated to meet the nutrient requirements of sheep of all ages. **FlaxLic® Sheep** is an all-natural supplement that contains a high level of Alpha-linolenic acid (ALA), a key omega-3 fatty acid that functions as a basic building block for reproductive hormones and anti-inflammatory compounds generated by the body. **FlaxLic® Sheep** contains 15% fat, which is derived predominantly from flaxseed and edible linseed (flaxseed) oil. This unique supplement is second to none when compared to other low-moisture blocks. This block is the product of a state-of-the-art patented process that provides a unique 24-hour feeding system. **FlaxLic® Sheep** is an exceptionally dense block that will give you the most for your money. Here's how:

- ✓ **Economical:** A low feeding rate means lower feeding costs (on a per head per day basis).
- ✓ **Mineral Fortification:** This supplement is Vitamin and Mineral fortified, eliminating the need to feed additional free-choice minerals, resulting in a significant supplemental feed cost savings.
- ✓ **Weather Resistant:** The patented, "continuous flow" system creates a quality, low-moisture, exceptionally dense block that maintains its integrity even in hot, humid weather or precipitation.
- ✓ **Minimal Labor:** **SmartLic® FlaxLic® Sheep** is easy to feed. Simply place the blocks in areas of easy access to the livestock.
- ✓ **Returnable Steel Barrels** are economical and environmentally friendly and eliminate the expense of additional feeding equipment. Ask us about other available packaging options and packaging size options.

FLAXLIC® SHEEP

FEEDING DIRECTIONS

Provide free choice as a supplement to sheep at a rate of one block for each 25 to 35 head. Place in pasture near areas frequented by livestock, such as watering locations, shade or loafing areas. Sheep normally consume approximately 1 to 4 ounces per head per day. Consumption may vary depending on climate, grazing conditions, condition of livestock and/or availability of other feeds. In situations where climate and/or other factors result in consumption less than expected, intake of supplement can be increased by providing additional blocks per pasture.

Provide access to fresh water and free-choice salt at all times.
